For those in search of a new direction in the new economy, after a year without using money, Steve McAllister provides the basics for the new revolution and hope for a new renaissance. At a time when financial systems are falling apart, economic and gender inequality abound, trust in government is at an all time low, people are losing faith in their religion, and the world faces possible cataclysmic climate change, *Money, Sex, Power & Faith* offers a glimpse at how we got to this point and where we go from here. Looking at how our culture was created by weaving these disparate entities together over the last 10,000 years, this book takes an insightful, witty, incendiary, and hopeful look at the foundations of our civilization to ask the hard questions that must be asked about finance, equality, America, and Christianity.
