inLanguage	english

In *Today's Superpower: Building Networks: 7 Mindsets Principles to Thrive in a Fast-Changing World*, Mikel Mangold explores the intersection between the new startup and multistakeholder economy, mindset and networks. Change happens when people with a collaborative and ecosystem mindset are plugged into the right networks. This book discusses seven mindset principles enabling the listener to thrive in the startup and multi-stakeholder economy by building and growing networks of ideas and knowledge, networks of resources such as capital and infrastructure, and networks of people to join your mission. Most people think change comes from a top-down approach, where the people in the middle and the bottom don't have much power to effect change. In *Today's Superpower: Building Networks: 7 Mindsets Principles to Thrive in a Fast-Changing World*, Mikel Mangold challenges this common-held belief and that anyone can drive a transformation, answering questions like:

- What is a startup ecosystem?
- Why should I care about the new economy?
- How can I be successful in this fast-changing world?
- And more...

A balanced mixture of hard science, soft skills, and bold speculation, *Today's Superpower: Building Networks* is the definitive guide to both the present and the future of our economy.
